Class 28: Another Image Model: Iterating Over Positions

Held: Friday, March 12, 2010

Summary: We consider a simple approach to working with images - looping over the positions in an image and computing a new color based on positional information. We then explore some applications of this approach.

Notes:

- Reading for Monday: List Recursion, Revisited.
- Yes, that's right, we have another week of recursion. Fun, right?
- I should have a cool surprise from SIGCSE for you next week.
- Don't forget to email me questions on the exam. I think I've responded to all the ones that I've received.
- Please don't forget to check the Q&A section at the end of the exam.

Overview:

- Iterating over positions.
- Blends and other positionally-computed images.
- Drawing simple shapes.
