

Class 23: Iterating Over Positions

Held: Tuesday, 6 October 2009

Summary: We consider a simple approach to working with images - looping over the positions in an image and computing a new color based on positional information. We then explore some applications of this approach.

Related Pages:

Notes:

- Please keep your lab partners from yesterday.
- Are there questions on Assignment 5?
- The department is sponsoring another lunchtime talk on Friday on *Video Analytics*. Is anyone interested in attending? (We want an accurate count for food).
- So that you have as much time as possible for lab, I'm going to try to talk as little as possible. I will, however, answer questions on the reading.

Overview:

- Iterating over positions.
- Blends and other positionally-computed images.
- Drawing simple shapes.
