### Notes:

- Exam 2 is ready.
- Are there questions on Assignment 4? I've made a few changes to that assignment based on questions from late last night.

### Overview:

- Basics of `if`.
- Lab.

## Basics

- You know the basics:

```
if (TEST)
    TRUE-PART;
else
    FALSE-PART;
```

- Distinguished from conditionals in Scheme in that the two parts are statements, rather than expressions.
  - You can't use the "result" of a conditional statement.
- Best learned through practice.
- C also provides a conditional expression and another form of conditional, both of which we'll cover tomorrow.

## Lab

- Do the lab
- Be prepared to discuss your solutions.
