CSC161 2011S *Imperative Problem Solving*

Class 28: Macros

Held: Friday, 11 March 2011

Summary: We consider ways in which to use the C preprocessor, particularly in the use of macros.

Related Pages:

- EBoard.
- Lab: Macros and the C Preprocessor.
- Reading: K&R 4.11.

Notes:

- Is anyone reading these? Drop me a note. (I'd promise conference swag to the first person to drop me a note, but the conference swag is pretty mediocre this year; I'll still try to dig something up.)
- Feel free to continue sending me email on Exam 2. (You might even get mediocre conference swag for sending me an exam question.)
- I've posted some notes on your questions on the macros reading. However, they are incomplete.
- There is no reading for Monday, no matter what the schedule says.
- Give Andrew a hard time (but not too hard a time).
- EC for the play this weekend.

Overview:

- Using the Preprocessor.
- Macros and the C Preprocessor.

Basics

- The C preprocessor processes a variety of simple directives, such as `#include`, `#define` and such.
- Run the C preprocessor with `cc -E file.c`
- The output goes to standard out, so you may want to read through it with `less`

Lab

- Do the lab.
