

Class 23: Haskell (2)

Held: Wednesday, 16 March 2011

Summary: We continue our exploration of Haskell, focusing more on Haskell's higher-order approaches and Curried techniques.

- Reading: Tate 8.3.

Notes:

- There is a lot of illness going around campus. Please try to take care of yourselves.
- Because so many of you seem so ill, and could probably use the extra rest, there will be *no class* on Friday. I still expect questions on the last Haskell section.
- Mid-semester exam to be distributed tomorrow. Due Saturday after break.
- A few of you reported on Piazzza being insanely slow at times. I talked to the Piazzza people at the conference, and they asked that you send them email when you encounter slowness.

Overview:

- Haskell v. Clojure.
- The Second Haskell Lab.

Haskell v. Clojure

A student question: Why learn Haskell and Clojure?

- Why learn Haskell if you've already learned Clojure?
- Why learn Clojure if you're going to learn Haskell?

And yes, AT did start to answer this question.

Lab

- Do The second Haskell lab.
