

Class 19: Topic 15: Central Limit Theorem

Held: Wednesday, 5 March 2008

Summary: We conclude Unit 5 by looking at the interrelationships between the various parts of the unit. In particular, we explore what the CLT and z-scores can help tell us about samples.

Notes:

- I will reserve time at the start of class for anyone who wants to discuss recent events on campus.
- Next assignment: Activities 15-7, 15-8, 15-13, 15-14, and 16-1.
- We're trying a new strategy to help make sure you get through the activities: Note that the first activity in the next topic is part of the assignment. This activity has a lot of reading, and so this strategy seems particularly appropriate.)
- Handouts: Applet: Normal Probability Calculator.
- Due: Activities 14-6, 14-7, 14-9, and 14-12.

Overview:

- Reflections on Unit 3
- Today's activities: Putting it Together
